

INFINITY

Infinity is born to create a special illumination, on the basis of real life performances, starting from the realisation of the reflector, and building all the rest around it.

Its shape gives a sense of power and of protection, and thanks to its versatility, it is possible to create innovative and personalized solutions, especially on the technological aspect: ad the Xr6 version, which is provided with moon leds, and ready to be run both with the electronic ballasts and with the ACLS.

Infinity is really important.... by name and means!

INNOVATING REFLECTOR

This pendant has been designed starting from its innovating reflector, which grants a very regular and uniform light output, exploiting the whole HQI bulb light power. Two very important results has been reached:

- uniform light output on a surface of 90x70 cm;

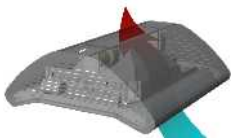

- the particular form of the reflector grants the lighting flow to be directed only into the aquarium tank, avoiding shocking for the spectator.

STABILITY

The external structure is made of painted aluminium which is ensured by an internal tough frame made of galvanized steel; that means the pendant is extremely stable and there is no metal dilatation.

NO FANS

Ventilation is granted by a "chimney effet system": two air intakes on the bottom and a pierced grill on the top let the air circulate through the lighting structure.

In this way there is no need to install fans and consequently the pendant is very silent while working.

COMPACT

Stability and natural good ventilation grant the possibility to include ferromagnetic reactors and electronic ballasts for T5 tubes without using external boxes.

FORT5 TUBES

The reflector has been designed in a way to have housing for two T5 tubes on each side of the pendant, so to have four T5 at least on each model.

EASY MAINTENANCE

All electric and electronic components which require technical maintenance can be easily replaced just taking off one of the two sides of the lighting.

SUITABLE FOR ACLS INSTALLATION

Excellent performances of INFINITY XR4 can be greatly exalted by installing the Acls dimming system. Acls version include blue moon leds which light is gradually increased by the system.

WIDE CHOICE OF HQI BULBS

INFINITY XR4 can be equipped with 250 and 400 W bulbs, both double-ended (Fc2) and single ended (E40) , with colour temperature 10.000 °K and 14.000 °K.

A brand new characteristic is the bulb 400 W double ended (Fc2).

Models equipped by bulbs 400 W single ended E40 also have two very important features:

- a switch which grants the possibility to install both 250W and 400 W bulbs;
- a sliding system makes the lamp holder move and locate the bulb burner at the very centre of the reflector.

MODELS FOR ALL REQUIREMENTS

INFINITY range include three categories:

- Singol model : 1x250w (E40-Fc2) + 4x24
1x400w (E40) + 4x24w
- Double model: 2x250w (E40-Fc2) + 4x54w
2x400w (E40) + 4x54w
- Triple model: 3x250w (E40-Fc2) + 8x39w
3x400w (E40) + 8x39w

CODE FC2 / E40	Model	Dimension	HQI	Tube T5	With ACLS
SFII02 / SFII10	Infinity XR4 1x250	60x55cm	1x250 W	4x24 W	2 Leds BLU
SFII03 / SFII11	Infinity XR4 1x400	60x55cm	1x400 W	4x24 W	2 Leds BLU
SFII05 / SFII12	Infinity XR4 2x250	120x55cm	2x250 W	4x54 W	2 Leds BLU
SFII06 / SFII13	Infinity XR4 2x400	120x55cm	2x400 W	4x54 W	2 Leds BLU
SFII08 / SFII14	Infinity XR4 3x250	180x55cm	3x250 W	8x39 W	4 Leds BLU
SFII09 / SFII15	Infinity XR4 3x400	180x55cm	3x400 W	8x39 W	4 Leds BLU
